MESSAGE

Message on International Women's Day

Women's International Day was celebrated on March 8. As a special tribute to the role women play in our associations, UPADI would like to extend its congratulations to all our colleagues whose work and effort contribute to building sustainable, fair, and supportive development. Over the last two decades, a considerable number of women have chosen to study engineering, fact which makes us feel very proud and comforted. Female intelligence and dedication at the service of our associations has planted the seed for gender equality in fields that used to be alien to women.

In 2010, UPADI prepared a video devoted to women's work in engineering; it includes interviews with several engineers who work in civil, electro-mechanic, and electronic engineering. This video was produced with the purpose of encouraging young women to study engineering and contribute with all their skills and qualities to the social, technical, and economic development of their nations.
