

# meeting point

Monthly Newsletter, July 2011

## MESSAGE

The Pan-American Federation of Engineering Societies (UPADI) was created on July 20, 1949, with the purpose of uniting engineers from all over Latin America and to consolidate engineering as a discipline to promote social development in the continent.

After 62 years, UPADI continues leading Pan-American engineering with the strong objective of searching for innovative solutions to various development challenges in its member countries. Issues such as the environment, energy, sustainability, technological transfer, transportation, design and construction and many others are part of the concept of innovation which engineering needs to adopt to contribute to society.

UPADI has become the meeting point for professionals in engineering, so we celebrate this anniversary with all the organizations in the Americas that share the goal of achieving humanity's development in the XXI century.
